Taking Care of People

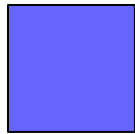

Concept of Care Framework

The Quadruple Aim

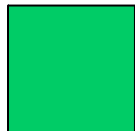

Ensuring that the total military force is medically ready to deploy and that the medical force is ready to deliver health care anytime, anywhere in support of the full range of military operations, including humanitarian missions

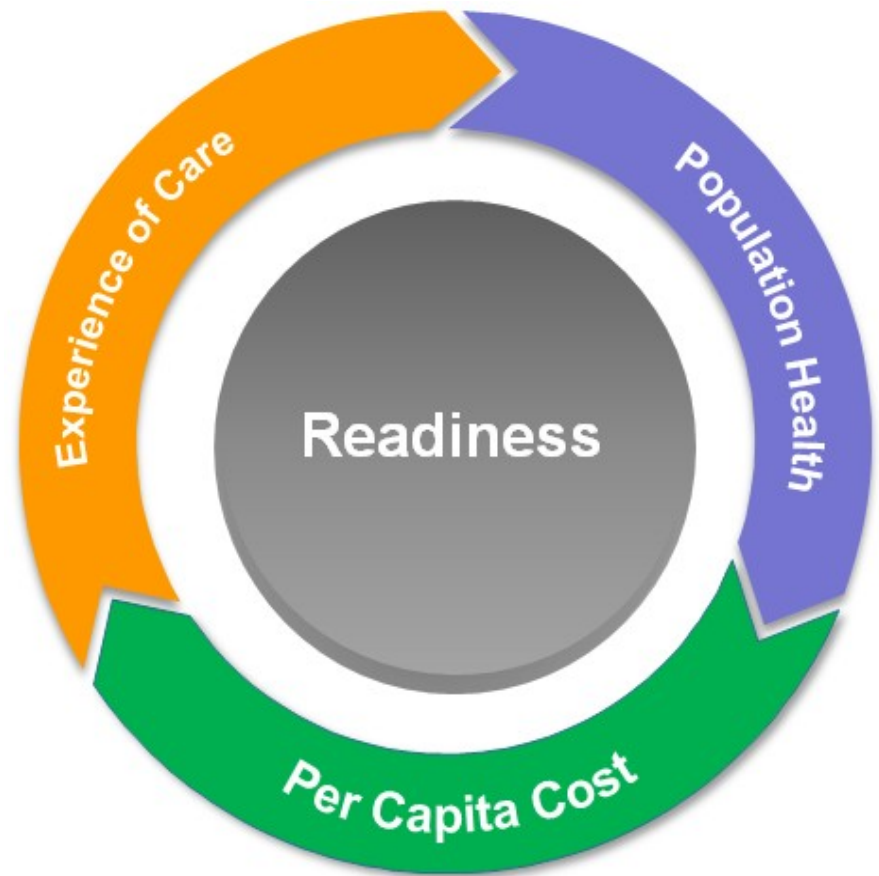

Providing evidence-based care. Improving the health of a population by encouraging healthy behaviors and reducing the likelihood of illness through focused prevention and the development of increased resilience.

Providing a care experience that is patient and family centered, compassionate, convenient, equitable, safe and always of the highest quality

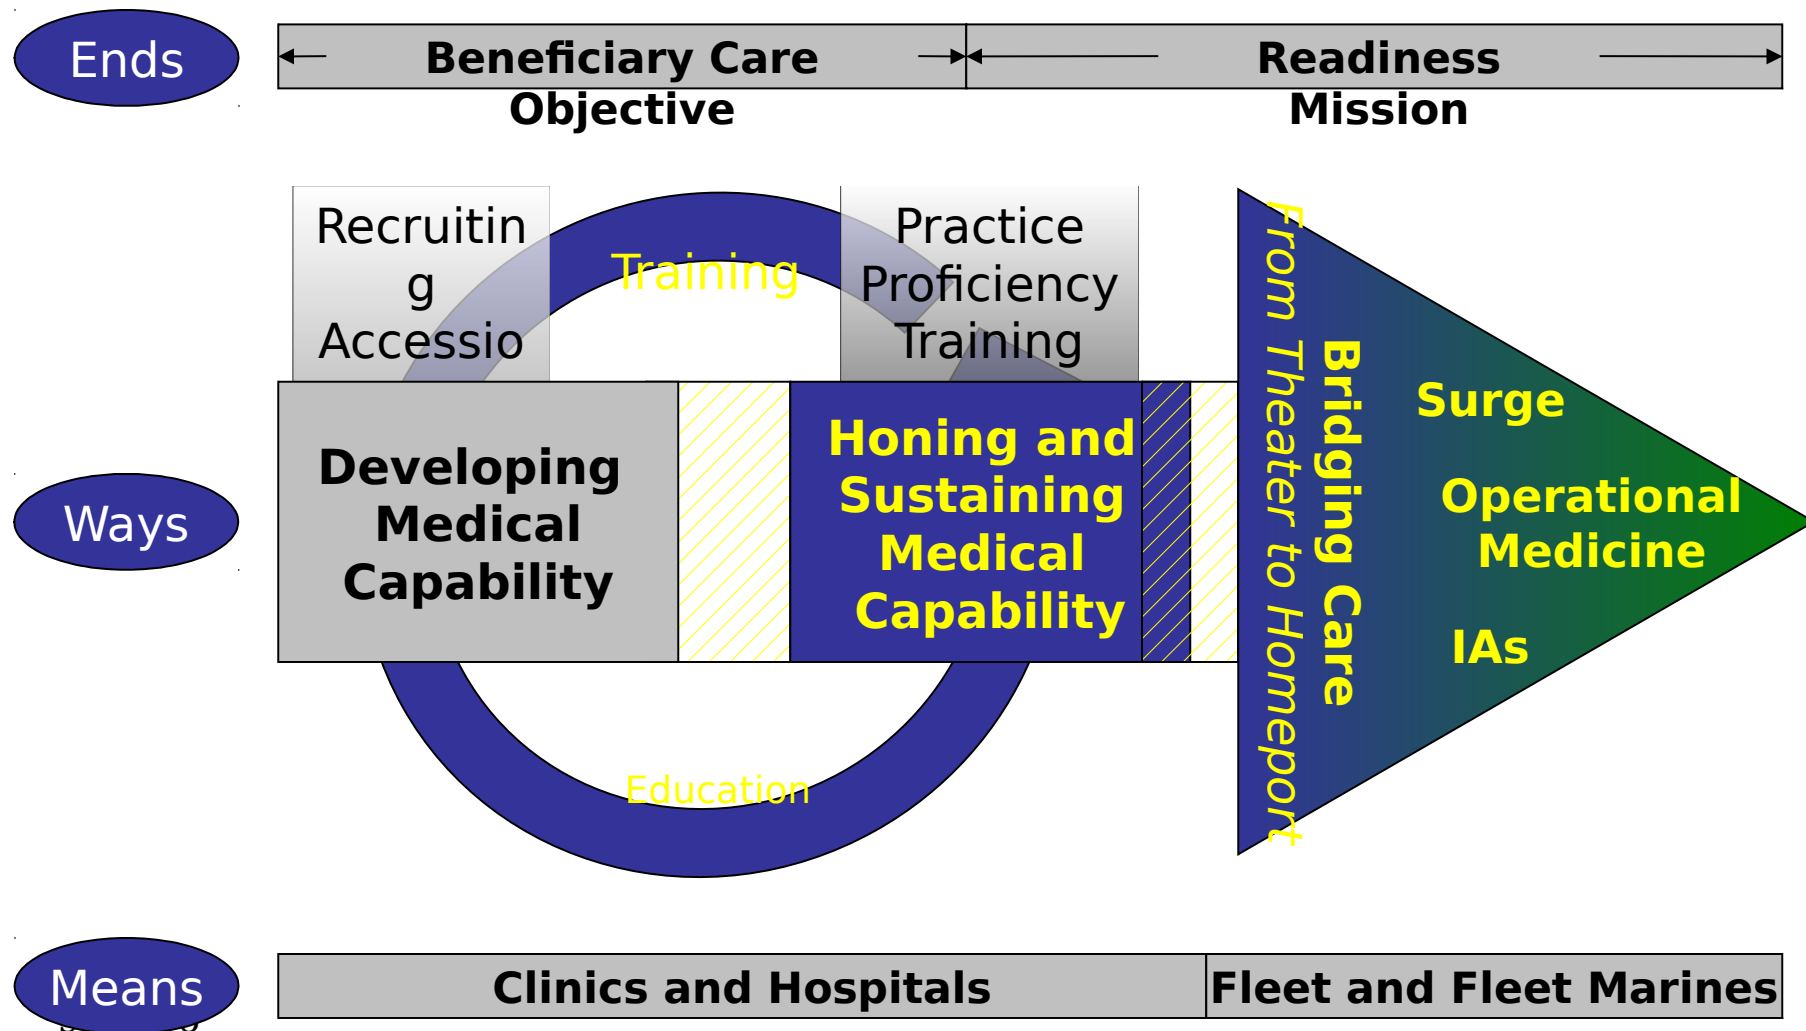

Creating value by focusing on quality, eliminating waste, and reducing unwarranted variation; considering the total cost of care over time, not just the cost of an individual health

Let's examine our

A Medical Manpower Strategy

The Total Force Concept
